

OceanTools

Cyclops

Single camera video control unit

The OceanTools **Cyclops** is a Single Camera Video Control Unit that supports a subsea camera, optional Pan & Tilt unit and lights.

Overview

The OceanTools **Cyclops** camera controller is a Single Camera Video Control Unit that can power and control a single **OceanCAM-CC** or **OceanCAM-ZF** camera. The **Cyclops** unit can also control an optional **PT330** pan & tilt unit as well as an **OceanLED** or pair of **OceanLED** subsea lights.

An integral joystick gives accurate pan & tilt control, with positional feedback clearly displayed. The unit also includes "Home" and "Saved" position buttons.

Cyclops can operate over suitable umbilical cables up to 750m in length.

The output from the **Cyclops** control unit is a single composite video signal that may be taken to a monitor – perhaps via an OceanTools video overlay.

The controller is housed in a rugged IP67 rated enclosure, suitable for deck operation.
