

Teledyne SeaBotix ROVs added to UVS Range

UVS is now able to offer the range of innovative Teledyne SeaBotix vehicles to complement the existing ROVs in our product catalogue. Teledyne SeaBotix produces a range of low logistics ROVs that are ideal for many applications where rapid deployment and ease of setup are key requirements. Packed in rugged cases the SeaBotix ROVs are easy to transit to a site and operations can be run using a standard generator where there is no electrical power available.

AUS-ROV SeaBotix Operators in Action

SeaBotix operators AUS-ROV have recently reported on a number of jobs that have been completed with the versatile and reliable SeaBotix ROV. For one inspection, UVS provided on-site technical support with UVS Workshop Manager, Grant Maddison, supporting the job for a few days. The SeaBotix vLBV300 ROV was deployed with a HD camera and a water sampling device.

REMUS Autonomous Launch & Recovery

Hydroid has announced the release of Line Capture Line Recovery (LCLR), a self-contained module that is initially offered on Hydroid's REMUS 600 autonomous underwater vehicle for the purpose of autonomous launch and recovery.

"We designed the LCLR to be a first-of-its-kind system that will make the launch and recovery process completely autonomous," said Duane Fotheringham, president of Hydroid. "This will enable easier vehicle recovery and increase operational flexibility. As industry leaders, it is our goal to continue to progress autonomous technologies, which is illustrated with the development of this innovative product."

Double Eagle Story

The Double Eagle Mk II is arguably the world's most advanced Mine Disposal System, and is now in the service of seven navies worldwide. Operated by the Royal Australian Navy (RAN) since 1999, the Double Eagle is supported by BlueZone Group company, ATSA Defence Services, from workshops in Newcastle, New South Wales, Australia.

Read more about the story of the Double Eagle Down Under as recently featured in ROVplanet magazine.
