Teledyne RDI ADCP Collects Valuable Data During Hurricane Katrina

Hurricane Katrina struck the Gulf of Mexico in August 2005, resulting in one of the most devastating natural disasters in US history. Prior to this catastrophic event, Ocean Data Technologies Inc. deployed subsurface current meter moorings at the Telemark location, Atwater Valley, Gulf of Mexico, with Teledyne RDI's ADCPs to monitor ocean currents and conditions before, during and after the hurricane.

Plotting Safe Courses for Autonomous Vessels

The use of autonomous technology in the maritime industry is increasing, and the safety implications for seafarers, cargo and vessels are the latest discussion subject. The use of fully autonomous ships alters the traditional method of humans on board using standard digital products designed for human interpretation.
